DETAILED ACTION

Election/Restrictions

1. Claims 32 and 57 are allowable. Claims 33, 35, 39, 40, 41, 42, 43, 44, 45, 46, 47, 48, 49, 50, 51, and 59, previously withdrawn from consideration as a result of a restriction requirement, require all the limitations of an allowable claim. Pursuant to the procedures set forth in MPEP § 821.04(a), **the restriction requirement between inventions 1 through 15, as set forth in the Office action mailed on 6/19/2008, is hereby withdrawn** and claims 33, 35, 39, 40, 41, 42, 43, 44, 45, 46, 47, 48, 49, 50, 51, and 59 are hereby rejoined and fully examined for patentability under 37 CFR 1.104. In view of the withdrawal of the restriction requirement, applicant(s) are advised that if any claim presented in a continuation or divisional application is anticipated by, or includes all the limitations of, a claim that is allowable in the present application, such claim may be subject to provisional statutory and/or nonstatutory double patenting rejections over the claims of the instant application. Once the restriction requirement is withdrawn, the provisions of 35 U.S.C. 121 are no longer applicable. See *In re Ziegler*, 443 F.2d 1211, 1215, 170 USPQ 129, 131-32 (CCPA 1971). See also MPEP § 804.01.

EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Brett Valiquet on 5/20/2009.

The application has been amended as follows:

Claim 35:

In line 2, "the displacement" has been changed to --the pivot--.

Claim 40:

In line 1, "a sensor" has been changed to --the force sensor--.

Claim 57 has been changed to:

A method for guiding an endless web, comprising the steps of:

guiding the endless web via a first positionable roll directly to an additional positionable roll with a predetermined angle of wrap on each roll, shafts of the rolls lying parallel to one another in a plane and being held by a frame;

the web being fed to an led away from the positionable rolls held by the frame via a respective first stationary roll and a respective additional stationary roll;

the frame being pivotable relative to the stationary rolls about a first axis of rotation substantially perpendicular to the plane in order to modify a position of an edge of the web;

the frame being pivotable relative to the stationary rolls about a second axis of rotation parallel to a movement direction of the web between the positionable rolls with an actuated adjustment device that is actuated by at least one of the functions selected from the group consisting of manually, electrically, hydraulically, and pneumatically to make said web rigid to prevent sagging; and

[positioning at least one sensor situated along the web, a signal of which is dependent on a sagging comprising a movement in a direction perpendicular to a plane of said web of one side of the web, an in which the signal is supplied to a control circuit that pivots the frame about the second axis of rotation in such a way that the one-sided sagging of the web is reduced or is controlled to a value zero.]

positioning at least one sensor situated along the web that detects a sagging comprising a movement in a direction perpendicular to a plane of said web of one side of the web, the at least one sensor producing a signal dependent on the detected sagging, said signal being supplied to a control circuit that pivots the frame about the second axis of rotation in such a way that the one-sided sagging of the web is reduced or is controlled to a value zero.

2. The following is an examiner's statement of reasons for allowance:

A device for guiding an endless web as claimed including particularly wherein along the web there is situated at least one sensor that acquires a sagging comprising a movement in a direction perpendicular to a plane of the web at one side of the web and indicates it via a control device, and in which, dependent on the indication, the frame is pivoted about the second axis of rotation as defined in combination of all of the limitations of **claim 32** is not taught nor suggested by the prior art of record.

A method for guiding an endless web as claimed including particularly positioning at least one sensor situated along the web that detects a sagging comprising a movement in a direction perpendicular to a plane of said web of one side of the web, the

at least one sensor producing a signal dependent on the detected sagging, said signal being supplied to a control circuit that pivots the frame about the second axis of rotation in such a way that the one-sided sagging of the web is reduced or is controlled to a value zero as defined in combination of all of the limitations of **claim 57** is not taught nor suggested by the prior art of record.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
